

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 2, Volume 58
May 5, 2010

VIBURNUM APHID: Noticeable on snowball bush in Crawford County.

REDHEADED ASH BORER: Adults have been active the past two weeks.

THRIPS and APHIDS: These two pests were the most commonly encountered insects during live plant dealer inspections. Most of the aphids were GREEN PEACH APHIDS.

WALNUT TWIG BEETLE: None have been detected in traps or by observation so far. A statewide survey is being conducted this year. This beetle is the vector of Thousand Cankers Disease of black walnut.
